
NWB Data Conversion & DANDI Publishing

Standardizing Neurophysiology Data for Open Science

Benjamin Dichter | CatalystNeuro | February 2026

01

THE CHALLENGE

Why neurophysiology data needs standardization

Current Data Landscape

- Labs use dozens of proprietary formats (SpikeGLX, Open Ephys, Plexon, ...)
- Data is siloed and difficult to share across institutions
- No standardized metadata makes reproducibility nearly impossible
- Researchers spend weeks writing custom loading scripts
- Published datasets lack the context needed for reuse

Our Approach

NWB Conversion

- Automated pipeline from 40+ formats
- Full metadata preservation
- Validation against NWB schema
- Handles multi-modal recordings

DANDI Publishing

- Upload to DANDI Archive
- DOI minting for citation
- BIDS-compatible organization
- Streaming access via LINDI
